Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer [5] GAAGAGAAGAGATCCAAGAGCTCTTTTTTTTTTTTTTTVN 3/], CDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. cDNA went through one round of normalization to Rot = 7.5 and subtraction to Rot = 37.5. Second strand cDNA was prepared with the primer adapter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       of sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Submitted (10-JUL-2000) Yoshihide Hayashizaki, The Institute of Physical and Chemical Research (RIKEN), Laboratory for Genome Exploration Research Group, RIKEN Gemomic Sciences Center (GSC), RIKEN Yokohama Institute; 1-7-22 Suchiro-cho, Tsurumi-ku, Yokohama, Kanagawa 230-0045, Japan (E-mail:genome-res@gsc.riken.go.jp, URL:http://genome.gsc.riken.go.jp/, Tel:81-45-503-9222,

pCMV-SPORT6; Site_1: NotI; Site_2: EcoRV (destroyed); RNA
source anonymous pool of 3 colons, age 26 yo male, 49 yo
female, 71 yo male colon; 46 yo male kidney, and pool of 2
stomachs, 62 yo male and 70 yo female. Library is
oligo-dT primed and directionally cloned (EcoRV site is
destroyed upon cloning). Average insert size 1.4 kb,
insert size range 1-3 kb. Library is normalized and
enriched for full-length clones and was constructed by C.

                                                                                                                                                                                                                                                                                                                                                        The present sequence is the mouse bcl-w gene encoding Bcl-w protein CC (see AAY05531), a pro-survival member of the Bcl-2 family which is CC widely expressed and which is essential for spermatogenesis. The CC invention relates generally to a method of treatment and to an CC animal model for the identification of molecules and genetic Sequences useful for inducing or reducing fertility of male sequences useful for inducing or reducing fertility of male commands. Methods are provided for the treatment of infertility, or CC animals. Methods are provided for the treatment of infertility, or CC model carries a mutation is at least one allele of the human or CC murine bcl-w gene or in a gene associated with bcl-w. Such animals CC infertile, but possess no other major abnormalities as determined CC infertile, but possess no other major abnormalities as determined CC infertile, but possess no other major abnormalities as determined CC infertile, canimals including genetic sequences capable of inducing, enhancing or otherwise facilitating spermatogenesis in CC animals or which can induce infertility

The bcl-2 family have both apoptotic activity and the apoptosis blocking activity. bcl-y falls in the apoptosis activity category. The recombinant protein may be used to prevent uncontrolled cell growth, either by its direct administration to recombinant genetic constructs to increase its expression in vivo. Also, antisense constructs can be used in disorders where prevention of cell death is desired.

CC generally multiple solerosis, movardial infarction, vitally induced cespecially multiple solerosis, may not be apparent. They may to selerosis - conditions where cells under go premature cell death, agono cells under go protein in thousand in the rapies to treat subjects suffering from: strokes, head trauma, cespecially multiple solerosis), myocardial infarction, vitally induced cespecially multiple solerosis, may or may not be apparent. They may also be cell death, aging, spinal cord injuries and amyotrophic lateral cespecially in this way to develop cell lines which remain viable in culture for cused in this way to develop cell lines which remain viable in culture for an extended period. In contrast, if they act as cell death stimulators, and extended period. In contrast, if they act as cell death stimulators, and subjects solerosis, conditions where cells under go premature cell death as a cell death.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       documentation_block:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The mammalian bcl-y genes encode a protein that is a member of the bcl-2 family, components in the cell death pathway. The bcl-2 family have both apoptotic activity and the apoptosis blocking activity. bcl-y falls in the apoptosis activity category. The recombinant protein may be used to prevent uncontrolled cell growth, either by its direct administration to recombinant genetic constructs to increase its expression in vivo. Also, antisense constructs can be used in disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        expression in vivo. Also, antisense const. where prevention of cell death is desired.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 3; Column 15/16; 27pp; English.

CC specification also describes rat bcl-y protein (Rbol-y) and CC Hbcl-y are homologues of the bcl-2 protein thought to be involved in CC programmed cell death (apoptosis and necrosis). Rbcl-y and Hbcl-y CC programmed cell death (apoptosis and necrosis). Rbcl-y and Hbcl-y CC proteins may be used to treat conditions associated with a disruption of CC proteins may be used to treat subjects suffering from: strokes, they may be CC lately in therapies to treat subjects suffering from: strokes, they may be CC especially multiple sclerosis, myocardial infarction, vitally induced CC (especially multiple sclerosis), myocardial infarction, vitally induced CC ell death, aging, spinal cord injuries and amyotrophic lateral CC sclerosis- conditions where cells under go premature cell death as a CC result of triggers which may or may not be apparent. They may also be CC used in this way to develop cell lines which remain viable in culture for CC an extended period. In contrast, if they act as cell death stimulators, Rbcl-y and Hbcl-y may be used to treat conditions associated with CC Rbcl-y and Hbcl-y may be used to treat conditions associated with CC consecutions also clared with CC consecutions and auto/hyperimmune diseases. They may also be used to cause cell death in, and hence control, parasites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    23-FEB-1996;
